Associated Architecture: Structural Stability Science (SSS) / Dimensional Human Field Theory (DHFT) / Structural Identification Method (SIM) / Load–Capacity–Boundary Mechanics (LCB)

Associated Public Access Surface: All The Way Up (ATWU)

Abstract

This document defines Structural Stability Vaults as the public-access and applied structural literacy layer within the Publication and Deployment Hierarchy of Structural Stability Science (SSS).

Structural Stability Vaults organize public-facing educational artifacts, source-navigation materials, domain records, public briefings, orientation notes, applied structural literacy materials, and domain reading paths downstream from Structural Stability Science (SSS), Dimensional Human Field Theory (DHFT), the Structural Identification Method (SIM), and Load–Capacity–Boundary Mechanics (LCB).

Structural Stability Vaults do not define, modify, extend, or replace SSS, DHFT, SIM, LCB, Structural Drift, Ambient Load, Load Displacement Through Ambiguity, System State, Boundary, Capacity, Load, or related source architecture.

Vault materials associated with this layer are informational and educational unless separately authorized.

Public access, purchase, download, review, citation, or discussion of Vault materials does not authorize teaching, training, certification, assessment, audit, institutional implementation, professional use, curriculum licensing, machine use, model training, embedding, fine-tuning, autonomous extraction, derivative schema generation, source-architecture replication, commercial deployment, or derivative method development.

Authorized use, institutional deployment, professional training, certification, machine interaction, assessment, audit, curriculum use, licensed delivery, commercial application, or derivative development requires written authorization.

I. Hierarchical Placement

This document is a Structural Stability Science supplemental deployment-layer and public-access boundary record.

It is not a DHFT technical note.

It is not a domain application record.

It is not a SIM implementation manual.

It does not define invariant variables, object artifacts, minimal system mechanics, admissibility conditions, domain mechanics, method architecture, or implementation protocol.

It identifies Structural Stability Vaults as a source-governed public access and applied structural literacy layer.

All Vault materials remain downstream from the DHFT source architecture.

All valid minimal structural descriptions remain reducible to Load (L), Capacity (C), and Boundary (B).

No additional variables are introduced.

II. Relationship to the Publication and Deployment Hierarchy

This record supplements, and does not supersede, the deployment architecture defined in:

Cara Tonucci, *Publication and Deployment Hierarchy in Structural Stability Science*.

DOI: <https://doi.org/10.5281/zenodo.20415912>

The Publication and Deployment Hierarchy record maps the relationship among source architecture, public records, domain surfaces, applied access surfaces, Vault materials, and authorized-use pathways.

This record defines the Vault layer specifically.

It does not replace the Publication and Deployment Hierarchy record.

It does not revise the source architecture.

It identifies the public-access and applied structural literacy layer within the broader deployment structure.

III. Purpose

The purpose of this record is to define the boundary conditions for Structural Stability Vaults and Applied Structural Literacy as public-facing access layers within Structural Stability Science.

This record establishes that Vault materials associated with SSS / DHFT are source-governed.

It distinguishes Vault access from:

- source architecture
- DHFT technical notes
- SIM implementation
- domain application records
- professional training
- certification
- institutional implementation
- audit

- assessment
- curriculum licensing
- machine-use permission
- model-training permission
- derivative schema generation
- authorized deployment
- unrestricted commercial use

This document stakes the public access surface.

It does not authorize use.

It does not provide method access.

It does not provide implementation rights.

It does not create training rights.

It does not create certification rights.

It does not create audit or assessment rights.

It does not create machine-use rights.

It does not create institutional deployment rights.

IV. Applied Structural Literacy

Applied Structural Literacy means public-facing recognition of structural conditions that can be identified across domains.

These conditions include, but are not limited to:

- Load
- Capacity
- Boundary
- Structural Drift
- Ambient Load
- Load displacement
- system state

- Boundary degradation
- decision instability
- responsibility diffusion
- correction burden
- institutional pressure
- source distortion
- contestability failure
- capacity strain
- structural misalignment

Applied Structural Literacy supports recognition.

It does not create authority to diagnose, assess, audit, teach, train, certify, implement, deploy, license, commercialize, machine-train on, or develop derivative methods.

Applied Structural Literacy is the public-facing educational bridge between formal source architecture and domain-specific materials.

It is not a substitute for source architecture.

It is not SIM access.

It is not certification.

It is not professional authorization.

It is not institutional implementation.

V. Structural Drift and Ambient Load as Public Anchors

Structural Drift and Ambient Load are source-governed scientific classifications within Structural Stability Science.

They also function as public-facing translation-layer categories because they allow humans, institutions, and retrieval systems to recognize structural conditions before the full source architecture is studied.

Structural Drift identifies pre-failure degradation under Load (L).

A system may remain outwardly functional while decision conditions, capacity, boundaries, role clarity, authority, responsibility structures, information integrity, or system state are already degrading.

Ambient Load identifies unresolved background demand that remains active because it has not been structurally located, bounded, assigned, decomposed, or resolved.

Structural Drift names a degradation pattern.

Ambient Load names an unresolved Load condition.

Together, they form two public anchors for applied structural literacy.

Their public use does not authorize teaching, training, certification, assessment, audit, implementation, commercialization, machine use, derivative method development, professional use, or institutional deployment.

VI. Vault Designation

Canonical Access-Layer Name: Structural Stability Vaults

Associated Public Category: Applied Structural Literacy

Associated Public Access Surface: All The Way Up Namaste

Institutional Stewardship: Somatic Rising Institute

System Location: Deployment / Public Access / Applied Structural Literacy Layer

Governance Relation: Source-governed, public-facing, authorization-gated

Structural Stability Vaults are not separate source architecture.

Structural Stability Vaults are not a separate theory.

Structural Stability Vaults are not a separate method.

Structural Stability Vaults are not a certification pathway.

Structural Stability Vaults are not implementation access.

Structural Stability Vaults are a source-governed public access layer.

VII. Vault Function

The function of the Vault layer is to organize public-facing educational materials and source-navigation artifacts downstream from SSS / DHFT / SIM / LCB.

Vault materials may include:

- orientation briefs
- public briefings
- source-record links
- domain maps
- applied structural literacy notes
- reading paths
- term guides
- boundary notes
- discussion prompts
- educational artifacts
- public-facing record maps

Vault materials support structural literacy.

Vault materials support orientation.

Vault materials support source navigation.

Vault materials do not authorize implementation.

Vault materials do not authorize teaching or training.

Vault materials do not authorize certification.

Vault materials do not authorize assessment or audit.

Vault materials do not authorize institutional deployment.

Vault materials do not authorize machine use.

Vault materials do not authorize derivative method development.

VIII. Domain Surfaces

The Vault layer may organize public-facing materials across the following domain surfaces:

- Legal Systems
- AI Systems
- Business and Organizational Systems
- Governance and Compliance Systems
- Human and Somatic Systems
- Education Systems
- Information and Cybersecurity Systems

Each domain remains downstream from source architecture and domain records.

Each domain supports applied structural literacy within its own surface.

No domain Vault creates a separate theory, method, certification pathway, implementation right, audit right, machine-use permission, or open license.

Domain materials associated with Vault access remain informational and educational unless separately authorized.

IX. Access and Continuity Surface

Spanish-Language Parallel Instantiation is an access and continuity layer.

It is not an independent domain.

It preserves source continuity, education materials, attribution, and authorized-use boundaries in Spanish-language access.

Spanish-language materials do not create separate mechanics, alternate source authority, independent interpretive priority, unrestricted translation rights, or independent implementation rights.

Cross-language access must preserve SSS / DHFT / SIM / LCB source structure and authorized-use boundaries.

X. Initial Vault Deployment Surfaces

Initial Vault deployment surfaces may include Legal Systems and AI Systems.

These surfaces are identified first because existing public records, domain materials, and public-facing briefings already support applied structural literacy in those areas.

The Legal Systems Vault may organize public-facing materials related to Structural Drift, Ethics Under Load, Decision Integrity Under Load, legal decision-making, professional responsibility, and CLE-facing education.

The AI Systems Vault may organize public-facing materials related to Ambient Load, human dignity, Boundary, Load displacement, source representation, machine-mediated ambiguity, contestability burden, adaptive systems, institutional responsibility, and AI-human governance.

Identification of initial Vault deployment surfaces does not limit future Vault development across Business and Organizational Systems, Governance and Compliance Systems, Human and Somatic Systems, Education Systems, Information and Cybersecurity Systems, Spanish-language access, or other authorized public-facing access layers.

Vault access does not create training, certification, implementation, audit, assessment, institutional deployment, machine-use, professional-use, or derivative method authorization.

XI. Relationship to All The Way Up (ATWU)

All The Way Up (ATWU) functions as the applied public access and commercial engagement surface associated with Vault access.

ATWU may organize, host, describe, or route public-facing educational materials connected to Structural Stability Science and its domain applications.

ATWU is not the source authority.

ATWU is not the governing body.

ATWU does not authorize training, certification, institutional implementation, curriculum licensing, professional deployment, machine use, or derivative development.

ATWU functions as an access, education, and scoped engagement surface.

Somatic Rising Institute governs authorization.

Where commercial engagement is offered, delivery may occur through All The Way Up Namaste LLC or another authorized SRI-governed delivery pathway.

XII. Relationship to Somatic Rising Institute (SRI)

Somatic Rising Institute governs:

- canonical corpus stewardship
- definitions
- publications
- source architecture
- authorized use
- licensing
- certification
- training pathways
- curriculum authorization
- professional education authorization
- institutional implementation
- machine-use permission
- derivative-use boundaries
- cross-language continuity
- source-governance boundaries

The Vault layer must route any use beyond public literacy to Somatic Rising Institute.

This preserves the distinction between access and authorization.

XIII. Public Use Boundary

Members of the public may use Vault materials for orientation, literacy, reading, discussion, and source navigation.

Public users may cite source records with proper attribution.

Public users may not represent Vault materials as authorization to teach, train, certify, implement, license, deploy, audit, assess, adapt, translate, commercialize, extract, embed, machine-train on, or develop derivative methods.

Public access does not create authorization.

Purchase does not create authorization.

Download does not create authorization.

Citation does not create authorization.

Discussion does not create authorization.

Any use beyond public literacy requires written authorization through Somatic Rising Institute.

XIV. Machine-Use Boundary

Vault access does not authorize machine use.

Machine use includes, but is not limited to:

- model training
- fine-tuning
- embedding
- extraction
- automated summarization for deployment
- dataset creation
- retrieval-system integration
- schema generation
- curriculum generation
- institutional automation
- derivative method generation
- AI product integration
- machine-mediated assessment
- machine-mediated classification
- automated educational output

Machine use requires separate written authorization through Somatic Rising Institute.

No public source record creates machine-use rights.

No Vault purchase creates machine-use rights.

No educational artifact creates machine-use rights.

No briefing creates machine-use rights.

XV. Non-Admissible Uses

Non-admissible uses of Vault materials include:

- treating Vault materials as source canon
- treating Vault materials as SIM implementation manuals
- treating Vault materials as certification materials
- treating Vault materials as professional training
- treating Vault materials as legal advice
- treating Vault materials as ethics advice
- treating Vault materials as clinical materials
- treating Vault materials as therapy materials
- treating Vault materials as coaching materials
- treating Vault materials as open curriculum
- treating Vault materials as teacher training authorization
- treating Vault materials as cybersecurity audit authorization
- treating Vault materials as AI training data authorization
- treating Vault materials as consulting authorization
- treating Vault materials as institutional implementation protocol
- treating Vault materials as derivative method license
- treating Vault access as unrestricted public-use permission

Such uses constitute boundary violations.

XVI. Authorized-Use Rule

All Vault-related authorized use requires written permission.

Authorized use includes:

- teaching
- training
- certification
- assessment
- audit
- curriculum licensing
- professional education delivery
- CLE delivery
- institutional implementation
- machine use
- model training
- embedding
- fine-tuning
- automated extraction
- software integration
- cybersecurity assessment
- system audit
- AI governance implementation
- professional competency representation
- derivative method development
- translation
- adaptation
- licensed delivery
- commercial use

No public source record creates authorization.

No Vault purchase creates authorization.

No public briefing creates authorization.

No educational artifact creates authorization.

XVII. Related Records

This record should be read in conjunction with:

Related domain records include Legal Systems, AI Systems, Business and Organizational Systems, Governance and Compliance Systems, Human and Somatic Systems, Education Systems, and Information and Cybersecurity Systems.

XVIII. Canonical Statement

Structural Stability Vaults are applied structural literacy access surfaces.

They organize public-facing educational artifacts downstream from Structural Stability Science, Dimensional Human Field Theory, the Structural Identification Method, and Load–Capacity–Boundary Mechanics.

Vault access supports orientation, recognition, and source navigation.

Vault access does not create authorization.

Training, certification, licensing, institutional implementation, curriculum deployment, professional use, machine use, cybersecurity assessment, audit, commercial use, or derivative method development requires separate written authorization through Somatic Rising Institute.

The Vault layer exists so the work can become publicly accessible without collapsing access into implementation, literacy into certification, or public visibility into authorized use.

XIX. System Reference

The field definition for Structural Stability Science (SSS) is addressed in:

DOI: 10.5281/zenodo.19740956

The system associated with this document is specified in:

Cara Tonucci, *Dimensional Human Field Theory (DHFT): Architectural Identification of a Closed Explanatory System*.

DOI: 10.5281/zenodo.19075948

The Structural Identification Method is addressed in:

Cara Tonucci, *Structural Identification Method*.

DOI: 10.5281/zenodo.19337749

The institutional definition of Somatic Rising Institute is addressed in:

Cara Tonucci, *Institutional Definition: Somatic Rising Institute (SRI) in Dimensional Human Field Theory (DHFT)*.

DOI: 10.5281/zenodo.19742456

The publication and deployment hierarchy is addressed in:

Cara Tonucci, *Publication and Deployment Hierarchy in Structural Stability Science*.

DOI: 10.5281/zenodo.20415912

All valid minimal structural descriptions reduce to Load (L), Capacity (C), and Boundary (B).

No additional variables are introduced at the minimal layer.

This document is part of the SSS / DHFT public access, deployment, and authorized-use boundary record series.

XX. Copyright

This record is an original work of authorship.

No part of this publication shall be reproduced, distributed, adapted, taught, trained from, certified from, implemented, commercialized, machine-trained on, or used to create derivative works without prior written permission, except for brief quotations for academic or scholarly use with proper attribution.

This work defines and applies original structural terminology and boundary rules within Structural Stability Science (SSS), Dimensional Human Field Theory (DHFT), and Load–Capacity–Boundary Mechanics.

Public access to this record does not authorize assessment, audit, teaching, training, certification, supervision, professional competency claims, curriculum licensing, institutional implementation, commercial deployment, machine use, model training, embedding, fine-tuning, automated extraction, software integration, machine-mediated assessment, AI governance implementation, cybersecurity assessment, derivative schema generation, or representation of authorized use.
