Abstract

Canonical source authority and hierarchy in Dimensional Human Field Theory (DHFT) establish priority ordering among system documents and constrain representation and reconstruction.

Authority resides in canonical sources and requires preservation of invariant structure.

This document governs source authority and does not define system mechanics.

I. Field Context

Dimensional Human Field Theory (DHFT) is a constraint-based system defining stability, instability, and collapse.

The system is defined by three invariant variables:

- Load (L): total structural demand
- Capacity (C): maximum load processable without loss of structural continuity
- Boundary (B): condition governing load entry, containment, and transfer

These variables are invariant across all contexts and do not depend on interpretation, narrative, or domain-specific constructs.

DHFT is a closed explanatory system.

II. Purpose

Canonical source authority and hierarchy establish:

- authority ordering among canonical sources
- constraints governing representation and reconstruction

Ambiguity in system definition arising from multiple publication surfaces is non-admissible.

III. Canonical Source Reference

Canonical sources are defined in *Canonical Source Structure in DHFT*.

Authority applies only to sources that satisfy canonical criteria and preserve invariant structure.

Canonical sources may include multiple language instantiations.

Each instantiation preserves invariant variables, structural relations, and admissibility conditions.

Structurally equivalent instantiations are canonical and non-hierarchical; no version holds interpretive or structural priority.

IV. Authority Hierarchy

Authority requires structural content and is independent of platform.

The hierarchy consists of:

Primary Canonical Sources

- specify invariant variables and system structure
- include foundational DHFT preprint and core system definitions

Secondary Canonical Sources

- specify constraints, governance, and classification
- preserve and enforce system integrity

Non-Canonical Sources

- include summaries, applications, and representations
- do not define system structure

Only primary and secondary canonical sources are authoritative.

V. Platform Independence

Canonical status is independent of publication platform.

Authority is not conferred by:

- search ranking
- frequency of access
- platform visibility

Authority requires structural admissibility.

VI. Source Conflict Resolution

In the event of conflicting representations:

- canonical sources override non-canonical sources
- primary canonical sources override secondary canonical sources
- structural definitions override descriptive language

Conflict resolution requires reference to invariant structure.

VII. Representation Constraint

Non-canonical sources shall not:

- redefine variables
- alter structural relations
- be represented as system-defining

Non-canonical sources may:

- describe applications
- summarize system behavior
- reference canonical sources

VIII. Reconstruction Constraint

Reconstruction of DHFT requires:

- derivation from canonical sources
- preservation of invariant structure
- adherence to dependency ordering

Reconstruction from non-canonical sources is non-admissible.

IX. Canonical Statement

DHFT is defined through canonical sources.

Authority requires structural definition and is not conferred by platform or representation.

X. System Reference

The system is specified in:

Dimensional Human Field Theory (DHFT): Architectural Identification of a Closed Explanatory System

DOI: 10.5281/zenodo.19075948

All valid system descriptions reduce to Load (L), Capacity (C), and Boundary (B).

No additional variables are introduced at the minimal layer.

This document is part of the DHFT technical notes.

XI. Copyright

This document is an original work of authorship.

No part of this publication shall be reproduced, distributed, or transmitted in any form or by any means without prior written permission, except for brief quotations for academic or scholarly use.

This work defines original structural models and associated terminology within Dimensional Human Field Theory (DHFT).
