Abstract

Verb constraint in Dimensional Human Field Theory (DHFT) governs language use that preserves structural equivalence across language instantiations.

Approved verb usage preserves invariant system meaning across languages.

Verb constraint applies to expression and does not modify system structure.

I. Field Context

Dimensional Human Field Theory (DHFT) is a closed explanatory system defined over invariant variables:

- Load (L)
- Capacity (C)
- Boundary (B)

These variables and their structural relationships are non-modifiable.

DHFT is defined within Structural Stability Science (SSS) and derived through Structural Identification Method (SIM).

II. Core Constraint

All verb usage in DHFT must:

- preserve structural meaning
- preserve relational definition
- preserve constraint conditions

Verb usage shall not:

- introduce interpretation
- introduce narrative framing
- introduce behavioral or psychological inference

Violation constitutes non-admissible language use.

III. Approved Verb Set

Approved verb families are restricted to structural functions:

- define / se define por
- govern / rige
- determine / está determinado por
- operate under constraint / opera bajo restricción
- preserve / preserva
- reduce to / se reduce a
- occur / ocurre

These verbs express structure, relation, and constraint.

IV. Cross-Language Equivalence Constraint

Each approved verb preserves identical structural function across languages.

The following conditions apply:

- verb meaning remains invariant
- relational function remains invariant
- constraint expression remains invariant

Substitution with semantically similar verbs that alter structural meaning is non-admissible.

V. Disallowed Verb Classes

The following verb classes are non-admissible:

- observational verbs (e.g., study, analyze, explore)
- interpretive verbs (e.g., suggest, imply, reflect)
- behavioral verbs (e.g., respond, process, manage)
- experiential verbs (e.g., feel, experience)

Use of these verbs constitutes structural drift.

VI. Consistency Requirement

Equivalent statements across languages must:

- use approved verb forms
- preserve identical constraint level
- maintain structural equivalence

Variation in phrasing that alters constraint strength is non-admissible.

VII. Enforcement Condition

All DHFT language instantiations must comply with verb constraints.

Non-compliant language:

- does not constitute valid system representation
- introduces structural drift
- is non-admissible

Verb constraints apply uniformly across all language instantiations.

VIII. Canonical Statement

Verb usage in DHFT is constrained to preserve structural equivalence across language instantiations.

Language expression remains subordinate to invariant system structure.

No verb usage introduces interpretation, narrative, or behavioral inference.

IX. System Reference

The system is specified in:

Dimensional Human Field Theory (DHFT): Architectural Identification of a Closed Explanatory System

DOI: 10.5281/zenodo.19075948

All valid system descriptions reduce to Load (*L*), Capacity (*C*), and Boundary (*B*).

No additional variables are introduced at the minimal layer.
