Abstract

The Somatic Rising Institute (SRI) is the institutional body responsible for stewardship and enforcement of Dimensional Human Field Theory (DHFT).

The Institute operates at the system boundary and enforces structural constraints, canonical definitions, and admissibility conditions.

Institutional function does not constitute system definition and does not modify system structure.

I. Field Context

Dimensional Human Field Theory (DHFT) is a closed explanatory system defined over invariant variables:

- Load (L)
- Capacity (C)
- Boundary (B)

These variables and their structural relationships are non-modifiable.

DHFT is defined within Structural Stability Science (SSS) and derived through Structural Identification Method (SIM).

The Somatic Rising Institute operates external to system definition and does not define system mechanics.

II. Institutional Role

The Somatic Rising Institute functions as:

- steward of canonical DHFT definitions
- enforcer of structural constraints
- validator of admissibility conditions
- evaluator of derivative and applied work

The Institute does not function as:

- originator of system structure
- interpreter of system meaning
- modifier of system variables or relations

III. Authority Boundary

Institutional authority is limited to enforcement of structural constraints defined within DHFT.

The Institute:

- enforces admissibility conditions
- maintains canonical source integrity
- evaluates structural compliance

The Institute does not:

- redefine system variables
- alter structural relationships
- reclassify DHFT
- introduce new system-level constructs

IV. Relationship to Governance

Governance in DHFT is defined through structural constraints.

The Institute enforces governance conditions and does not establish them.

Structural constraints take precedence over institutional action.

Institutional decisions remain consistent with:

- canonical system definition
- admissibility conditions
- classification constraints
- boundary of use

V. Non-Equivalence of Institution and System

The following equivalence is non-admissible:

institution $\neq$ system

The Institute does not constitute DHFT.

DHFT is defined exclusively through invariant structure and canonical documents.

VI. Variable Definitions

Institutional continuity does not affect system definition.

Changes in:

- personnel
- organizational structure
- institutional form

do not modify:

- system variables
- structural relations
- canonical definitions

VII. Enforcement Condition

The Institute enforces structural integrity through:

- validation of admissible system representations
- identification of non-admissible use
- maintenance of canonical source authority

Institutional enforcement does not modify system structure.

VIII. Canonical Statement

The Somatic Rising Institute enforces structural constraints defined within DHFT and does not modify, redefine, or extend system structure.

Institutional function is limited to stewardship and enforcement.

IX. Scope Constraint

The governing inequality defines structural conditions only.

It does not:

- derive the dissipation function
- specify domain-specific implementations
- introduce additional system variables

X. Canonical Statement

DHFT is defined by invariant structure.

System stability is defined by the governing inequality.

Validity is defined by structural admissibility.

Interpretation does not alter system conditions.

XI. System Reference

The system is specified in:

Dimensional Human Field Theory (DHFT): Architectural Identification of a Closed Explanatory System

DOI: 10.5281/zenodo.19075948

All valid system descriptions reduce to Load (L), Capacity (C), and Boundary (B).

No additional variables are introduced at the minimal layer.

This document is part of the DHFT technical notes.

XII. Copyright

This document is an original work of authorship.

No part of this publication shall be reproduced, distributed, or transmitted in any form or by any means without prior written permission, except for brief quotations for academic or scholarly use.

This work defines original structural models and associated terminology within Dimensional Human Field Theory (DHFT).
