May 28, 2026 — Version 1.0

Associated Architecture: Structural Stability Science (SSS) / Dimensional Human Field Theory (DHFT) / Structural Identification Method (SIM) / Load–Capacity–Boundary Mechanics (LCB)

Abstract

This document defines Spanish-language parallel instantiation as a source-governed application and access surface within Structural Stability Science.

Spanish-language materials associated with SSS, DHFT, SIM, and LCB are not informal translations, derivative interpretations, simplified versions, or separate source architecture.

Spanish-language instantiation preserves source hierarchy, variable identity, structural relations, dependency order, boundary conditions, and authorized-use constraints.

This record applies to Spanish-language education materials, early childhood and K–12 curriculum surfaces, professional materials, companion guides, structural literacy resources, and public-facing application artifacts.

Spanish-language access does not authorize translation, adaptation, teaching, curriculum implementation, practitioner training, teacher training, certification, institutional deployment, machine use, or derivative development.

Authorized Spanish-language implementation, curriculum licensing, training, certification, institutional use, or derivative translation requires written authorization.

This governance record applies DHFT language-instantiation and cross-language equivalence conditions to Spanish-language materials within Structural Stability Science. It does not define language instantiation, modify DHFT, or create separate Spanish-language source architecture.

I. Hierarchical Placement

This document is a Structural Stability Science source continuity record.

It is not a DHFT technical note.

It does not define invariant variables, object artifacts, minimal system mechanics, admissibility conditions, or SIM implementation.

It identifies Spanish-language parallel instantiation as a source-governed access and application surface.

All Spanish-language materials remain downstream from the DHFT source architecture.

All valid minimal structural descriptions remain reducible to Load (L), Capacity (C), and Boundary (B).

No additional variables are introduced.

II. Purpose

This record defines the boundary conditions for Spanish-language parallel instantiation.

It establishes that Spanish-language materials associated with SSS / DHFT are source-governed.

It distinguishes Spanish-language instantiation from:

- informal translation;
- derivative interpretation;
- linguistic adaptation without authorization;
- separate source architecture;
- simplified access materials;
- unauthorized curriculum translation;

- unauthorized teaching materials;
- unauthorized professional training materials.

This document stakes the Spanish-language application and access surface.

It does not authorize use.

It does not publish full curriculum.

It does not create translation rights.

It does not create implementation rights.

III. Designation

Canonical Domain Name: Spanish-Language Parallel Instantiation

Included Surfaces:

- Spanish-language DHFT source records;
- Spanish-language SIM materials;
- Spanish-language structural literacy materials;
- Spanish-language education materials;
- Spanish-language early childhood and K–12 curriculum surfaces;
- Spanish-language companion guides;
- Spanish-language professional materials;
- Spanish-language public-facing application artifacts.

System Location: Source Continuity / Application / Translation Layer

Governance Relation: Source-governed, non-derivative, authorization-gated

Spanish-language instantiation is not separate source architecture.

Spanish-language instantiation is not a derivative theory.

Spanish-language instantiation is not an interpretive adaptation.

Spanish-language instantiation is a parallel source-governed access surface.

IV. Source Continuity Rule

Spanish-language materials preserve the source architecture.

They preserve:

- Load (L);
- Capacity (C);
- Boundary (B);
- structural relations;
- dependency order;
- source hierarchy;
- non-interpretive use;
- non-equivalence conditions;
- boundary of use;
- authorization constraints.

Variation in language does not alter source structure.

Spanish-language expression does not create interpretive priority.

English-language expression does not create interpretive priority.

No language version creates separate mechanics.

No language version creates authorized use.

V. Parallel Instantiation Boundary

Parallel instantiation means the same source architecture is expressed in another language while preserving structural identity.

Parallel instantiation does not mean:

- paraphrase;
- simplification;
- localization without constraint;
- cultural adaptation without authorization;
- pedagogical alteration;
- separate canon;

- independent translation rights;
- derivative method development.

Spanish-language instantiation must preserve the architecture.

Spanish-language instantiation must preserve the non-collapse boundary between source records, application materials, training pathways, and authorized use.

VI. Education and Curriculum Surface

Spanish-language instantiation includes education-facing surfaces.

These surfaces include:

- early childhood education materials;
- K–12 structural literacy materials;
- teacher-facing companion materials;
- curriculum-adjacent resources;
- classroom-facing structural awareness tools;
- Spanish-language education companions;
- Spanish-language source-literacy materials.

These materials are educational artifacts unless incorporated into an authorized pathway by written authorization.

They do not authorize classroom implementation.

They do not authorize school adoption.

They do not authorize teacher training.

They do not authorize curriculum licensing.

They do not authorize certification.

They do not authorize derivative curriculum development.

VII. Translation Boundary

Translation is governed by source authorization.

No person, institution, platform, school, organization, AI system, or downstream user is authorized to translate, adapt, localize, simplify, paraphrase, train from, or reproduce Spanish-language materials without written authorization.

Spanish-language materials do not create open translation rights.

Spanish-language materials do not authorize independent bilingual publication.

Spanish-language materials do not authorize derivative Spanish curriculum.

Spanish-language materials do not authorize machine translation for deployment.

All translation, adaptation, localization, curriculum conversion, and bilingual publication requires written authorization.

VIII. Training and Implementation Boundary

Spanish-language access does not authorize training.

Spanish-language access does not authorize certification.

Spanish-language access does not authorize practitioner use.

Spanish-language access does not authorize teacher training.

Spanish-language access does not authorize classroom implementation.

Spanish-language access does not authorize institutional deployment.

Spanish-language access does not authorize EMDR therapist training.

Spanish-language access does not authorize professional competency claims.

Authorized Spanish-language training, certification, curriculum licensing, practitioner use, teacher training, institutional deployment, supervision, or professional implementation requires written authorization.

IX. Machine-Use Boundary

Spanish-language materials are not machine-use licenses.

Spanish-language materials do not authorize:

- model training;
- embedding;
- fine-tuning;
- automated extraction;
- machine translation for deployment;
- derivative schema generation;
- AI-generated curriculum;
- AI-generated training materials;
- machine-mediated assessment;
- autonomous use of SSS / DHFT / SIM / LCB terminology or structure.

Any machine use requires prior written authorization.

X. Non-Admissible Uses

Non-admissible uses of Spanish-language materials include:

- treating Spanish-language records as separate canon;
- treating Spanish-language materials as informal translations;
- treating Spanish-language materials as derivative interpretations;
- treating Spanish-language access as implementation authorization;
- treating Spanish-language access as curriculum licensing;
- treating Spanish-language access as teacher training;
- treating Spanish-language access as practitioner training;
- treating Spanish-language access as certification;
- adapting Spanish-language materials without authorization;
- translating English materials into Spanish without authorization;
- translating Spanish materials into another language without authorization;
- creating Spanish-language derivative products, trainings, assessments, or curricula;
- using AI systems to translate, summarize, embed, or reproduce source architecture without authorization.

Such uses constitute boundary violations.

XI. Authorized-Use Rule

All Spanish-language authorized use requires written permission.

Authorized use includes:

- translation;
- adaptation;
- localization;
- curriculum use;
- classroom delivery;
- school implementation;
- teacher training;
- practitioner training;
- certification;
- supervision;
- institutional deployment;
- professional implementation;
- machine use;
- bilingual publication;
- derivative method development;
- commercial Spanish-language use.

No public Spanish-language record creates authorization.

No Vault purchase creates authorization.

No bilingual access creates authorization.

No Spanish-language curriculum companion creates authorization.

XII. Canonical Statement

Spanish-language parallel instantiation is a source-governed access and application surface within Structural Stability Science.

Spanish-language materials are language instantiations and educational access surfaces. They are not separate source architecture, derivative systems, simplified versions, adaptations, or authorization pathways.

Spanish-language materials do not define, modify, extend, replace, or reinterpret SSS, DHFT, SIM, LCB, Ambient Load, Structural Drift, or related source architecture.

Spanish-language instantiation preserves source hierarchy, variable identity, structural relations, dependency order, boundary conditions, and authorized-use constraints.

Spanish-language education materials support literacy.

Somatic Rising Institute governs Spanish-language training, certification, curriculum licensing, institutional implementation, professional authorization, and authorized use.

XIII. System Reference

The system associated with this record is specified in:

Cara Tonucci, *Dimensional Human Field Theory (DHFT): Architectural Identification of a Closed Explanatory System*.

DOI: 10.5281/zenodo.19075948

The Structural Identification Method is addressed in:

Cara Tonucci, *Structural Identification Method*.

DOI: 10.5281/zenodo.19337749

Parallel Spanish-language DHFT instantiation is addressed in:

DOI: 10.5281/zenodo.19741205

The boundary of use for DHFT is addressed in:

Cara Tonucci, *Boundary of Use in Dimensional Human Field Theory (DHFT)*.

DOI: 10.5281/zenodo.19741336

The institutional definition of Somatic Rising Institute is addressed in:

Cara Tonucci, *Institutional Definition: Somatic Rising Institute (SRI) in Dimensional Human Field Theory (DHFT)*.

DOI: 10.5281/zenodo.19742456

All valid minimal structural descriptions reduce to Load (*L*), Capacity (*C*), and Boundary (*B*).

XIV. Boundary of Use

This governance record is informational and definitional.

It does not disclose the Structural Identification Method as an implementation manual.

It does not authorize use of SIM, DHFT, LCB, Ambient Load, Structural Drift, Load Displacement Through Ambiguity, or related source architecture for assessment, audit, certification, training, institutional deployment, machine use, professional

implementation, practitioner training, teacher training, EMDR therapist training, supervision, or derivative method development.

All institutional, commercial, educational, training, certification, assessment, audit, implementation, machine-use, practitioner-training, teacher-training, supervision, or derivative use requires prior written authorization.

For authorized-use, training, licensing, institutional-use, or curriculum inquiries, contact Somatic Rising Institute through the official public contact channel.

XV. Copyright

This record is an original work of authorship.

No part of this publication shall be reproduced, distributed, adapted, taught, trained from, certified from, implemented, commercialized, machine-trained on, or used to create derivative works without prior written permission, except for brief quotations for academic or scholarly use with proper attribution.

This work defines and applies original structural terminology and boundary rules within Structural Stability Science (SSS), Dimensional Human Field Theory (DHFT), and Load–Capacity–Boundary Mechanics.

Public access to this record does not authorize assessment, audit, practitioner training, teacher training, EMDR therapist training, certification, supervision, professional competency claims, institutional implementation, commercial deployment, machine use, or representation of authorized use.
